Yoshida, Y., see Matsuura, I. 273
Zaspalis, V.T., van Praag, W., Keizer, K., van Ommen, J.G., Ross, J.R.H. and Burggraaf, A.J.
Reactions of methanol over catalytically active alumina membranes 205
Zaspalis, V.T., van Praag, W., Keizer, K., van Ommen, J.G., Ross, J.R.H. and Burggraaf, A.J.
Reactor studies using alumina separation membranes for the dehydrogenation of methanol and n-butane 223
Zaspalis, V.T., van Praag, W., Keizer, K., van Ommen, J.G., Ross, J.R.H. and Burggraaf, A.J.
The reactions of methanol over alumina catalytically active membranes modified by silver 235
Zaspalis, V.T., van Praag, W., Keizer, K., van Ommen, J.G., Ross, J.R.H. and Burggraaf, A.J.
Reactor studies using vanadia modified titania and alumina catalytically active membranes for the reduction of nitrogen oxide with ammonia 249

Subject Index

Acidity
Deactivation of zeolites in n-hexane cracking 37

Acidity
Selective ion exchange of palladium on alumina-silica composite oxides 95

Adsorption
Benzene hydrogenation on nickel catalysts. Role of weakly bound hydrogen 261

Adsorption
Characterization of charcoal supported ruthenium catalysts: temperature programmed hydrogen titration of adsorbed oxygen L5

Alkadiene hydrogenation
Selective ion exchange of palladium on alumina-silica composite oxides 95

Alkali doping
Steam reforming of 1-methyl naphthalene in the presence of sulfur on nickel-tungsten alumina catalysts doped with alkaline ions. I. Effect of each active component 173

Alkyne hydrogenation
Selective ion exchange of palladium on alumina–silica composite oxides 95

Alumina
Reduction of sulfur dioxide and surface sulfate on γ-alumina 53

Alumina
Structure and activity of composite oxide supported platinum–iridium catalysts 65

Alumina
Effect of sulfiding temperatures on the formation of sulfides of Mo/Al_2O_3 and $CoMo/Al_2O_3$ 109

Alumina
Reactions of methanol over catalytically active alumina membranes 205

Alumina
Selective ion exchange of palladium on alumina–silica composite oxides 95

Alumina membranes
Reactor studies using alumina separation membranes for the dehydrogenation of methanol and n-butane 223

Alumina membranes
The reactions of methanol over alumina catalytically active membranes modified by silver 235

Alumina membranes
Reactor studies using vanadia modified titania and alumina catalytically active membranes for the reduction of nitrogen oxide with ammonia 249

Aluminium hydroxide
Porous structure of aluminium hydroxide and its content of pseudoboehmite 29

Aromatization
Reactions of model compounds over steamed ZSM-5 at simulated FCC reaction conditions 83

Benzene hydrogenation
Benzene hydrogenation on nickel catalysts. Role of weakly bound hydrogen 261

Bimetallic catalysts
Structure and activity of composite oxide supported platinum–iridium catalysts 65

n-Butane dehydrogenation
Reactor studies using alumina separation membranes for the dehydrogenation of methanol and n-butane 223

n-Butane oxidation
Physicochemical characterization and catalytic behavior of VPO formulations 15

Carbon monoxide hydrogenation
Characterization of rhodium catalysts supported on various inorganic oxides for carbon monoxide hydrogenation 153

Carbon support
Heteropolyacids as catalysts for the production of phthalate diesters 191

Catalyst characterization (ESR, LTOC, XRD)
Characterization of supported vanadium oxide catalysts by a low-temperature oxygen chemisorption technique. III. The V_2O_5/ZrO_2 system 1

Catalyst characterization (ESR, TPR, XRD)
Effect of sulfiding temperatures on the formation of sulfides of Mo/Al_2O_3 and $CoMo/Al_2O_3$ 109

Catalyst characterization (IR, UV-VIS, XPS)
Characterization of rhodium catalysts supported on various inorganic oxides for carbon monoxide hydrogenation 153

Catalyst characterization (STEM, XPS, XRD)
Steam reforming of 1-methyl naphthalene in the presence of sulfur on nickel-tungsten

alumina catalysts doped with alkaline ions. I. Effect of each active component 173
Catalyst characterization (TEM)
Heat-stable ultrafine single-crystal magnesium oxide and its character as a support-material for high-temperature combustion catalysts 273
Catalyst characterization (TGA, TPD, TPR)
Reduction of sulfur dioxide and surface sulfate on γ-alumina 53
Catalyst characterization (TPRd, TPD)
Structure and activity of composite oxide supported platinum–iridium catalysts 65
Catalyst characterization (XRD, XPS)
Physicochemical characterization and catalytic behavior of VPO formulations 15
Catalyst preparation (dry method)
Heat-stable ultrafine single-crystal magnesium oxide and its character as a support-material for high-temperature combustion catalysts 273
Catalyst preparation (reduction)
Physicochemical characterization and catalytic behavior of VPO formulations 15
Catalyst preparation (wet impregnation)
Temperature-programmed reduction and zeta potential studies of the structure of MoO_3/Al_2O_3 and MoO_3/SiO_2 catalysts. Effect of the impregnation pH and molybdenum loading 125
Ceramic membranes
Reactions of methanol over catalytically active alumina membranes 205
Ceramic membranes
The reactions of methanol over alumina catalytically active membranes modified by silver 235
Charcoal support
Characterization of charcoal supported ruthenium catalysts: temperature programmed hydrogen titration of adsorbed oxygen L5
Cobalt
Effect of sulfiding temperatures on the formation of sulfides of Mo/Al_2O_3 and $CoMo/Al_2O_3$ 109
Coke formation
Deactivation of zeolites in n-hexane cracking 37
Cracking
Deactivation of zeolites in n-hexane cracking 37
Cracking catalysts
Reactions of model compounds over steamed ZSM-5 at simulated FCC reaction conditions 83
Deactivation
Deactivation of zeolites in n-hexane cracking 37
Deactivation
The reactions of methanol over alumina catalytically active membranes modified by silver 235
Dialkyl ethers
Heteropolyacids as catalysts for the production of phthalate diesters 191
Dispersion
Characterization of supported vanadium oxide catalysts by a low-temperature oxygen chemisorption technique. III. The V_2O_5/ZrO_2 system 1
Equilibrium shifts
Reactor studies using alumina separation membranes for the dehydrogenation of methanol and n-butane 223
Esterification
Heteropolyacids as catalysts for the production of phthalate diesters 191
Ethane conversion
Selective conversion of ethane into acetaldehyde by the photo-catalytic oxidation with oxygen over a supported molybdenum catalyst L1
Etherification
Heteropolyacids as catalysts for the production of phthalate diesters 191
di-2-Ethyl hexyl phthalate
Heteropolyacids as catalysts for the production of phthalate diesters 191
EuroPt-1
Reactor studies using alumina separation membranes for the dehydrogenation of methanol and n-butane 223
FCC
Reactions of model compounds over steamed ZSM-5 at simulated FCC reaction conditions 83
Formaldehyde
Influence of homogeneous gas phase reactions in the partial oxidation of methane to methanol

and formaldehyde in the presence of oxide catalysts 137
Gas-phase reactions
Influence of homogeneous gas phase reactions in the partial oxidation of methane to methanol and formaldehyde in the presence of oxide catalysts 137
Gasoline
Reactions of model compounds over steamed ZSM-5 at simulated FCC reaction conditions 83
Heteropolyacid
Heteropolyacids as catalysts for the production of phthalate diesters 191
n-Hexane
Deactivation of zeolites in n-hexane cracking 37
High-temperature combustion
Heat-stable ultrafine single-crystal magnesium oxide and its character as a support-material for high-temperature combustion catalysts 273
Hydrogen titration
Characterization of charcoal supported ruthenium catalysts: temperature programmed hydrogen titration of adsorbed oxygen L5
Inorganic oxides
Characterization of rhodium catalysts supported on various inorganic oxides for carbon monoxide hydrogenation 153
Ion exchange
Selective ion exchange of palladium on alumina–silica composite oxides 95
Isomerization
Reactions of model compounds over steamed ZSM-5 at simulated FCC reaction conditions 83
Magnesium oxide
Heat-stable ultrafine single-crystal magnesium oxide and its character as a support-material for high-temperature combustion catalysts 273
Magnesium/palladium oxide
Heat-stable ultrafine single-crystal magnesium oxide and its character as a support-material for high-temperature combustion catalysts 273
Maleic anhydride
Physicochemical characterization and catalytic behavior of VPO formulations 15
Mechanism
Heteropolyacids as catalysts for the production of phthalate diesters 191
Membrane reactor
Reactions of methanol over catalytically active alumina membranes 205
Membrane reactors
Reactor studies using vanadia modified titania and alumina catalytically active membranes for the reduction of nitrogen oxide with ammonia 249
Membranes
Reactor studies using alumina separation membranes for the dehydrogenation of methanol and n-butane 223
Membranes
The reactions of methanol over alumina catalytically active membranes modified by silver 235
Methane partial oxidation
Influence of homogeneous gas phase reactions in the partial oxidation of methane to methanol and formaldehyde in the presence of oxide catalysts 137
Methanol dehydrogenation
Reactor studies using alumina separation membranes for the dehydrogenation of methanol and n-butane 223
Methanol oxidation
Characterization of supported vanadium oxide catalysts by a low-temperature oxygen chemisorption technique. III. The V_2O_5/ZrO_2 system 1
Methanol selective oxidation
Reactions of methanol over catalytically active alumina membranes 205
Methanol selective oxidation
The reactions of methanol over alumina catalytically active membranes modified by silver 235
Molybdenum
Effect of sulfiding temperatures on the formation of sulfides of Mo/Al_2O_3 and $CoMo/Al_2O_3$ 109
Molybdenum/alumina
Temperature-programmed reduction and zeta potential studies of the structure of MoO_3/Al_2O_3 and MoO_3/SiO_2 catalysts. Effect of the impregnation pH and molybdenum loading 125

Molybdenum/silica
Temperature-programmed reduction and zeta potential studies of the structure of MoO_3/Al_2O_3 and MoO_3/SiO_2 catalysts. Effect of the impregnation pH and molybdenum loading 125
Molybdenum/silica
Selective conversion of ethane into acetaldehyde by the photo-catalytic oxidation with oxygen over a supported molybdenum catalyst L1
Nickel
Benzene hydrogenation on nickel catalysts. Role of weakly bound hydrogen 261
Nickel–tungsten
Steam reforming of 1-methyl naphthalene in the presence of sulfur on nickel–tungsten alumina catalysts doped with alkaline ions. I. Effect of each active component 173
Nitrogen oxide reduction
Reactor studies using vanadia modified titania and alumina catalytically active membranes for the reduction of nitrogen oxide with ammonia 249
Oxide catalysts
Influence of homogeneous gas phase reactions in the partial oxidation of methane to methanol and formaldehyde in the presence of oxide catalysts 137
Palladium
Selective ion exchange of palladium on alumina–silica composite oxides 95
pH effect
Temperature-programmed reduction and zeta potential studies of the structure of MoO_3/Al_2O_3 and MoO_3/SiO_2 catalysts. Effect of the impregnation pH and molybdenum loading 125
Photo-catalysis
Selective conversion of ethane into acetaldehyde by the photo-catalytic oxidation with oxygen over a supported molybdenum catalyst L1
Phthalate esters
Heteropolyacids as catalysts for the production of phthalate diesters 191
Platinum–iridium
Structure and activity of composite oxide supported platinum–iridium catalysts 65
Pore size
Porous structure of aluminium hydroxide and its content of pseudoboehmite 29
Pore structure
Porous structure of aluminium hydroxide and its content of pseudoboehmite 29
Pseudoboehmite
Porous structure of aluminium hydroxide and its content of pseudoboehmite 29
Pulse method
Deactivation of zeolites in n-hexane cracking 37
Pyrophosphate
Physicochemical characterization and catalytic behavior of VPO formulations 15
Radicals
Influence of homogeneous gas phase reactions in the partial oxidation of methane to methanol and formaldehyde in the presence of oxide catalysts 137
Regeneration
The reactions of methanol over alumina catalytically active membranes modified by silver 235
Rhodium
Characterization of rhodium catalysts supported on various inorganic oxides for carbon monoxide hydrogenation 153
Ruthenium/coal
Characterization of charcoal supported ruthenium catalysts: temperature programmed hydrogen titration of adsorbed oxygen L5
Selective oxidation
Physicochemical characterization and catalytic behavior of VPO formulations 15
Selectivity (acetaldehyde)
Selective conversion of ethane into acetaldehyde by the photo-catalytic oxidation with oxygen over a supported molybdenum catalyst L1
Selectivity (butene)
Reactor studies using alumina separation membranes for the dehydrogenation of methanol and n-butane 223
Selectivity (formaldehyde)
Reactions of methanol over catalytically active alumina membranes 205
Selectivity (formaldehyde)
Reactor studies using alumina separation membranes for the dehydrogenation of methanol and n-butane 223

Selectivity (formaldehyde)
The reactions of methanol over alumina catalytically active membranes modified by silver 235
Selectivity (formaldehyde)
Influence of homogeneous gas phase reactions in the partial oxidation of methane to methanol and formaldehyde in the presence of oxide catalysts 137
Selectivity (nitrogen)
Reactor studies using vanadia modified titania and alumina catalytically active membranes for the reduction of nitrogen oxide with ammonia 249
Silica
Selective ion exchange of palladium on alumina–silica composite oxides 95
Silver-modified alumina
The reactions of methanol over alumina catalytically active membranes modified by silver 235
Sintering
Heat-stable ultrafine single-crystal magnesium oxide and its character as a support-material for high-temperature combustion catalysts 273
Steam reforming
Steam reforming of 1-methyl naphthalene in the presence of sulfur on nickel-tungsten alumina catalysts doped with alkaline ions. I. Effect of each active component 173
Sulphiding temperature
Effect of sulfiding temperatures on the formation of sulfides of Mo/Al_2O_3 and $CoMo/Al_2O_3$ 109
Sulphur
Steam reforming of 1-methyl naphthalene in the presence of sulfur on nickel-tungsten alumina catalysts doped with alkaline ions. I. Effect of each active component 173
Sulphur dioxide reduction
Reduction of sulfur dioxide and surface sulfate on γ-alumina 53
Temperature-programmed reduction
Temperature-programmed reduction and zeta potential studies of the structure of MoO_3/Al_2O_3 and MoO_3/SiO_2 catalysts. Effect of the impregnation pH and molybdenum loading 125
Temperature-programmed titration
Characterization of charcoal supported ruthenium catalysts: temperature programmed hydrogen titration of adsorbed oxygen L5
Titania
Reactor studies using vanadia modified titania and alumina catalytically active membranes for the reduction of nitrogen oxide with ammonia 249
Titanium oxide
Structure and activity of composite oxide supported platinum–iridium catalysts 65
Ultrafine single-crystal
Heat-stable ultrafine single-crystal magnesium oxide and its character as a support-material for high-temperature combustion catalysts 273
Vanadia
Reactor studies using vanadia modified titania and alumina catalytically active membranes for the reduction of nitrogen oxide with ammonia 249
Vanadium oxide
Characterization of supported vanadium oxide catalysts by a low-temperature oxygen chemisorption technique. III. The V_2O_5/ZrO_2 system 1
Vanadium pentoxide–zirconium oxide
Characterization of supported vanadium oxide catalysts by a low-temperature oxygen chemisorption technique. III. The V2O5/ZrO2 system 1
VPO
Physicochemical characterization and catalytic behavior of VPO formulations 15
Weakly bound hydrogen
Benzene hydrogenation on nickel catalysts. Role of weakly bound hydrogen 261
Zeolites
Reactions of model compounds over steamed ZSM-5 at simulated FCC reaction conditions 83
Zeolites
Deactivation of zeolites in n-hexane cracking 37
Zeta potential
Temperature-programmed reduction and zeta potential studies of the structure of MoO_3/Al_2O_3 and MoO_3/SiO_2 catalysts. Effect of the impregnation pH and molybdenum loading 125

Zinc oxide
Reactor studies using alumina separation membranes for the dehydrogenation of methanol and n-butane 223
Zirconium oxide
Characterization of supported vanadium oxide catalysts by a low-temperature oxygen chemisorption technique. III. The V_2O_5/ZrO_2 system 1
ZSM-5
Reactions of model compounds over steamed ZSM-5 at simulated FCC reaction conditions 83
